

**I. AMENDMENT**

**A. In the Claims**

Please amend the claims as follows:

1. (Currently amended) A process including:

receiving, electrical signals from an ordering center computer system, the electrical signals representing a singular sheet, the sheet comprising a courier waybill area and at least one of a packing list or product code area and a customizable component area, wherein

if one of the at least one area includes the packing list or product code area, printing a packing list or product code on the packing list or product code area, and

if one of the at least one area includes the customizable component area, printing a customizable component on the customizable component area, the customizable component comprising a customer-specified personalized message, and

printing on the singular sheet, at the distribution center, on the waybill area, a courier waybill and a ship date and a customer-specified delivery date.

2. (Previously presented) The process of claim 1, wherein the sheet includes the customizable component area.

3. (Currently amended) The process of claim 1, wherein the sheet includes the packing list or product code area and the customizable component area.

4. (Currently amended) The process of claim 2, wherein the personalized message is from a customer to a recipient of a shipment according to the waybill.

5. (Currently amended) The process of claim 3, wherein the personalized message is from a customer to a recipient of a shipment according to the waybill.

6. (Previously presented) The process of claim 3, wherein electrical signals comprise shipping signals received from a courier shipping computer system and communicated to the ordering center system.

7. (Previously presented) The process of claim 4, wherein the electrical signals comprise shipping signals received from a courier shipping computer system and communicated to the ordering center system.

8. (Currently amended) The process of claim [[1]]5, wherein the electrical signals comprise shipping signals received from a courier shipping computer system and communicated to the ordering center system.

9. (Previously presented) The process of claim 1, further including printing a customer initiated ornamental design on the waybill area.

10. (Previously presented) The process of claim 1, wherein the sheet includes the customizable component area and further including:

separating the printed areas into respective pieces; locating both the customizable component piece and goods within a package; and

providing the package for shipment, with the customizable component within the package, in accordance with the waybill located outside the package.

11. (Previously presented) The process of claim 6, further including:  
separating the printed areas into respective pieces prior to  
shipment of a package and the waybill piece, such that the waybill piece is  
outside the package, but no other of said printed pieces is outside of the package, during the  
shipment.

12. (Previously presented) The process of claim 7, further including:  
separating the areas into respective pieces prior to shipment of a package and  
the waybill piece, such that the waybill piece is outside the package, but no other of said printed  
pieces is outside of the package, during the shipment.

13. (Previously presented) The process of claim 1, wherein the electrical  
signals comprise shipping signals received from a courier shipping computer system and  
communicated to the ordering center system.

14. (Previously presented) The process of claim 2, wherein the electrical  
signals comprise shipping signals received from a courier shipping computer system and  
communicated to the ordering center system.

15. (Previously presented) The process of claim 1, wherein the sheet includes  
the customizable component, and the customizable component comprises a customer initiated  
ornamental graphic.

16. (Previously presented) The process of claim 2, wherein the customizable  
component area comprises preexisting art work.

17. (Previously presented) Article produced by the process of any one of claims 1-16.

18. (Currently amended) A process including:  
printing a sheet comprising parts that include a packing list or product code, a customizable component, and a waybill shipping-sheet;  
packing at a distribution center, in response to information on the sheet; and  
separating the parts prior to shipment of a package such that the waybill shipping sheet part is located outside the package during the shipment, but no other of said parts is located outside the package during the shipment.

19. (Currently amended) The process of claim 18, wherein the shipment does not include shipment of the packaging list or product code part with the package.

20. (Previously presented) The process of claim 19, wherein the shipment includes shipment of the customizable component part within the package.

21. (Cancelled)

22. (Currently amended) A process comprising:  
providing a singular sheet means for carrying out a shipment, the means comprising a waybill component, a packing list or product code component, and a customizable component; printing a waybill information on the waybill component and in addition to the waybill information, printing two dates on the waybill component, one of said dates being a deliver by

date and an other of said dates being a ship date,

printing packing list or product code information on the packing list or product code component,

printing a personalized message from a customer to a recipient on the customizable component area;

adapting the sheet for separating the components prior to shipment of a package of goods specified by the packing list or product code information; and

packing at a distribution center responsive to the printed sheet.

23. (Previously presented) The process of claim 1, further comprising packing at the distribution center responsive to the printed sheet.

24. (Previously presented) A sheet produced by the process of any one of claims 18-20, 22-23.

25. (Currently amended) A process including:

printing ~~both~~ a ship date and a customer-specified delivery date and a waybill on a sheet at a distribution center, the customer-specified delivery date being specified at a computer system including a web site by a user of a consumer ordering system and communicated with the waybill to the distribution center;

forming a combination of at least two portions from the sheet with a package, the portions including a packing list or product code, a customizable component comprising a customer-specified personalized message, and a shipping sheet;

separating said at least two portions prior to shipment of the combination by courier on the ship date; and

packing at the distribution center responsive to information on the sheet.

26. (Previously presented) The process of claim 25, wherein the at least two portions includes the shipping sheet portion and the customizable component portion, and the shipment includes shipment of the customizable component within a box and the shipping sheet outside the box.

27. (Currently amended) ~~A product combination~~ A product produced by the process of any one of claims 25-26.

28. (Currently amended) The process of claim 22, ~~wherein the sheet comprises the customizable component and the waybill component, and~~ further including printing a customer initiated ornamental design on the waybill component.

29. (Currently amended) The process of any one of claims 1-16, 18-20, 22-23, 25-26, 28, wherein the printing is facilitated by a TCP/IP communication, and wherein the packing list or product code is printed so as to specify a type of flower.

30. (Currently amended) An apparatus including:  
a computer system comprising a computer operably connected to an input device and to an output device, the computer programmed to facilitate receiving information at the input device from a consumer ordering system and processing the information, to produce output at the output device, the output comprising a singular sheet received from an ordering center, comprising a courier waybill area and at least one of a packing list or product code area and a customizable component area, wherein the computer programmed to carry out the operations

of:

if one of the at least one area includes the packing list or product code area, printing a packing list or product code on the packing list or product code area, and

if one of the at least one area includes the customizable component area, printing a customizable component on the customizable component area, the customizable component comprising a customer-specified personalized message[.]; and

printing at a distribution center, on the waybill area, a courier waybill and a ship date and a customer-specified delivery date.

31. (Previously presented) The apparatus of claim 30, wherein the output comprises the printed customizable component.

32. (Currently amended) The apparatus of claim 30, wherein the output comprises the printed packing list or product code area and the printed customizable component area.

33. (Currently amended) The apparatus of claim 31, wherein the personalized message is from a customer to a recipient of a shipment according to the waybill.

34. (Currently amended) The apparatus of claim 32, wherein the personalized message is from a customer to a recipient of a shipment according to the waybill.

35. (Previously presented) The apparatus of claim 33, further comprising an ordering center system programmed to receive shipping signals from a courier shipping computer system and send the shipping signals and ordering signals to the output device at a

distribution center so as to facilitate said printing.

36. (Previously presented) The apparatus of claim 34, further comprising an ordering center system programmed to receive shipping signals from a courier shipping computer system and send the shipping signals and ordering signals to the output device at a distribution center so as to facilitate said printing.

37. (Previously presented) The apparatus of claim 35, further comprising a consumer ordering system communicating the ordering information to the ordering center system.

38. (Previously presented) The apparatus of claim 36, further comprising a consumer ordering system communicating the ordering information to the ordering center system.

39. (Previously presented) The apparatus of claim 30, further comprising an ordering center system programmed to receive shipping signals from a courier shipping computer system and to receive ordering signals from consumer ordering system send the shipping signals and ordering signals to the output device at a distribution center so as to facilitate said printing.

40. (Previously presented) The apparatus of claim 31, wherein the output comprises a customer initiated ornamental design on the waybill area.

41. (Previously presented) The apparatus of claim 31, wherein the output

comprises the customizable component, and the customizable component comprises a customer initiated ornamental graphic.

42. (Previously presented) The apparatus of claim 31, wherein the output comprises the customizable component, and the customizable component area comprises preexisting art work.

43. (Previously presented) The apparatus of any one of claims 30-42, further including a package having an outside supporting the waybill piece after the waybill piece is separated from the other said printed areas but prior to shipment, such that no other of said printed pieces is supported by the outside of the package during the shipment.

44. (Previously presented) The apparatus of any one of claims 30-42, wherein the computer is programmed such that the output comprises specifying a type of flower.

45. (Currently amended) A process including:  
providing a singular sheet comprising a courier waybill area and at least one of a packing list or product code area and a customizable component area, wherein  
if one of the at least one area includes the packing list or product code area,  
printing a packing list or product code on the packing list or product code area, and  
if one of the at least one area includes the customizable component area,  
printing a customizable component on the customizable component area, the customizable component comprising a customer-specified personalized message, and  
printing, on the waybill area, a courier waybill and a ship date and a customer-specified delivery date, and

providing a package containing flowers associated with the sheet so that, on the ship date, to a truck of a courier corresponding to the courier waybill ~~is-enabled~~ to convey the package with the sheet and the flowers for arrival by the courier on the customer-specified delivery date.

46. (Currently amended) A process including:

printing a sheet comprising parts that include a waybill part and at least two one of a customizable part and a packing list or product code part, ~~a customizable component, and a shipping sheet;~~

separating the parts prior to

providing a package of flowers such that the ~~shipping sheet~~ waybill part is located outside the package during shipment by a courier, but no other of said at least ~~two~~ one ~~parts is~~ located outside the package during the shipment.

47. (Currently amended) A process comprising:

providing a singular sheet means for carrying out a shipment, the means comprising ~~at least two of a~~ waybill component ~~([,])~~ and at least one of a customizable component and a packing list or product code component ~~by, and a customizable component;~~ wherein

~~if one of the at least two components includes the waybill component,~~ printing a waybill ~~information~~ on the waybill component and in addition to the waybill information, printing two dates on the waybill component, one of said dates being a deliver by date and an other of said dates being a ship date,

if one of the at least ~~two~~ one ~~components~~ includes the packing list or product code component, printing packing list or product code information on the packing list or product code component,

if one of the at least ~~two~~ one ~~components~~ includes the customizable component, printing personalized message from a customer to a recipient on the customizable component area;

identifying flowers corresponding to the sheet;

separating the components; and

providing a box of the flowers corresponding to the sheet for shipment with said separated components.

48. (Currently amended) A process including:

printing both a ship date and a customer-specified delivery date on a sheet comprising a waybill, the customer-specified delivery date being specified in connection with an order of flowers made at a web site by a user of a consumer ordering system;

forming a combination of at least ~~two~~ one portion[[s]] from the sheet with a package, the portions including a customizable component comprising a customer-specified personalized message, and packing list or product code, ~~a customizable component comprising a customer-specified personal message, and a shipping sheet~~;

separating said at least ~~two~~ one portion[[s]] from the waybill prior to shipment according to the waybill of the combination and the flowers by a courier on the ship date for delivery on the customer-specified delivery date.

49. (Currently amended) The process of claim 1, ~~wherein the sheet includes the waybill area; and~~ further comprising:

packing at the distribution center, in response to information on the sheet; and  
separating the areas prior to shipment of a package such that the waybill area is  
located outside the package during the shipment, but no other of said areas is located outside  
the package during the shipment.

50. (Previously presented) The process of claim 22, wherein the packing is  
carried out with the waybill component located outside the package during the shipment, but no  
other of said components is located outside the package during the shipment.

51. (Previously presented) The apparatus of claim 30, wherein subsequent to  
the printing at the distribution center, separating the areas and locating the areas such that the  
waybill area is outside a package during shipment, but no other of said printed pieces is outside  
of the package during the shipment, the package being packed responsive to the output.

52. (Previously presented) The process of claim 47, further comprising:  
receiving at a distribution center, electrical signals from an ordering center  
computer system, the electrical signals representing the at least two of components; and  
wherein:

said printing is carried out at the distribution center; and  
the providing a box containing the flowers includes packing the flowers at the  
distribution center in response to information on the sheet, and locating the waybill component  
outside the box during the shipment, but no other of said components is located outside the  
package during the shipment.

53. (Previously presented) The process of claim 48, further comprising:

receiving at a distribution center, electrical signals from an ordering center computer system, the electrical signals representing the at least two of portions; and wherein:  
said printing is carried out at the distribution center; and  
the forming a combination includes packing the flowers at the distribution center in response to information on the sheet, and locating the waybill component outside the package during the shipment, but no other of said components located outside the package during the shipment.

54. (Currently amended) A process including:

printing both a ship date and a customer-specified delivery date on a sheet comprising a waybill, the customer-specified delivery date being specified in connection with an order of flowers made at a web site by a user of a consumer ordering system;

forming a combination of at least ~~two~~ one portion[[s]] from the sheet with a package, the at least one portion comprising portions including a customizable component comprising a customer-specified personalized message, and a packing list or product code, a customizable component comprising a customer-specified personal message, and a shipping sheet;

separating said at least ~~two~~ one portion[[s]] from the waybill prior to shipment of the combination and the flowers by a courier on the ship date

receiving at a distribution center, electrical signals from an ordering center computer system, the electrical signals representing the at least two of portions; and wherein:

said printing is carried out at the distribution center,

the forming a combination includes packing the flowers at the distribution center in response to information on the sheet, and locating the waybill component outside the package during the shipment, but no other of said components located outside the package

during the shipment, and

the customizable component comprises a heart or wreath.

55. (New) A process including:

receiving, electrical signals from an ordering center computer system, the electrical signals representing a singular sheet, the sheet comprising a courier waybill area and at least one of a packing list or product code area and a customizable component area, wherein

if one of the at least one area includes the packing list or product code area, printing a packing list or product code on the packing list or product code area, and

if one of the at least one area includes the customizable component area, printing a customizable component on the customizable component area, the customizable component comprising a customer-specified personalized message, and

printing, at the distribution center, on the waybill area, a courier waybill and a ship date and a customer-specified delivery date, wherein the customer-specified delivery date and customer-specified personalized message are being specified in connection with an order of flowers at a website by a user of a consumer ordering system.

56. (New) A process comprising:

receiving at a distribution center, electrical signals from an ordering computer system, the electrical signals representing a singular sheet for carrying out a shipment, the singular sheet comprising a waybill component, a packing list or product code component, and a customizable component;

printing at the distribution center, waybill information on the waybill component and in addition to the waybill information,

printing at the distribution center, two dates on the waybill component, one of

said dates being a deliver by date and an other of said dates being a ship date,

printing at the distribution center, packing list or product code information on the packing list or product code component,

printing at the distribution center, a personalized message from a customer to a recipient on the customizable component area, wherein said delivery by date and said personalized message are being specified in connection with an order of flowers at a website by a user of a consumer ordering system;

adapting the sheet for separating the components prior to shipment of a package of goods specified by the packing list or product code information; and

packing at a distribution center responsive to the printed sheet.

57. (New) A process including:

receiving at a distribution center, electrical signals from an ordering computer system, the electrical signals representing a singular sheet for carrying out a shipment, the singular sheet comprising a shipping sheet component, a packing list or product code component, and a customizable component;

printing both a ship date and a customer-specified delivery date on shipping sheet component of a singular sheet at a distribution center, the customer-specified delivery date being specified at a web site by a user of a consumer ordering system and communicated to the distribution center;

forming a combination of at least two portions from the sheet with a package, the portions including a packing list or product code, a customizable component comprising a customer-specified personalized message, and a shipping sheet, wherein the customer-specified delivery date and customer-specified personalized message are being specified in connection with an order of flowers at a website by a user of a consumer ordering system;

separating said at least two portions prior to shipment of the combination by courier on the ship date; and

packing at the distribution center responsive to information on the sheet.

58. (New) An apparatus including:

a computer system comprising a computer operably connected to an input device and to an output device, the computer programmed to facilitate receiving information at the input device from a consumer ordering system and processing the information, to produce output at the output device, the output comprising a singular sheet received from an ordering center, comprising a courier waybill area and at least one of a packing list or product code area and a customizable component area, wherein the computer programmed to carry out the operations of:

if one of the at least one area includes the packing list or product code area, printing a packing list or product code on the packing list or product code area, and

if one of the at least one area includes the customizable component area, printing a customizable component on the customizable component area, the customizable component comprising a customer-specified personalized message, and

printing at a distribution center, on the waybill area, a courier waybill and a ship date and a customer-specified delivery date, wherein the customer-specified delivery date and customer-specified personalized message are being specified in connection with an order of flowers at a website by a user of a consumer ordering system.

59. (New) A process including:

providing a singular sheet comprising a courier waybill area and at least one of a packing list or product code area and a customizable component area, wherein

if one of the at least one area includes the packing list or product code area, printing at a distribution center, a packing list or product code on the packing list or product code area, and

if one of the least one area includes the customizable component area, printing at a distribution center, a customizable component on the customizable component area, the customizable component comprising a customer-specified personalized message; and

printing at the distribution center, on the waybill area, a courier waybill and a ship date and a customer-specified delivery date, and

providing a package containing flowers associated with the sheet so that, on the ship date, a truck of a courier corresponding to the courier waybill is enabled to convey the package with the sheet and the flowers for arrival by the courier on the customer-specified date, wherein the customer-specified delivery date and customer-specified personalized message are being specified in connection with an order of flowers at a website by a user of a consumer ordering system.

60. (New) A process comprising:

providing a singular sheet means for carrying out a shipment, the means comprising at least two of a waybill component, a packing list or product code component, and a customizable component; wherein

if one of the at least two components includes the waybill component, printing waybill information on the waybill component and in addition to the waybill information, printing two dates on the waybill component, one of said dates being a delivery by date and an other of said dates being a ship date,

if one of the at least two component includes the packing list or product code

component, printing packing list or product code information on the packing list or product code component,

if one of the at least two components includes the customizable component, printing customer-specified personalized message from a customer to a recipient on the customizable component area wherein the delivery by date and customer-specified personalized message are being specified in connection with an order of flowers at a website by a user of a consumer ordering system;

identifying flowers corresponding to the sheet;

separating the component; and

providing a box of the flowers corresponding to the sheet for shipment with said separated components.

61. (New) A process including:

receiving at a distribution center, electrical signals from an ordering center computer system, the electrical signals representing the sheet comprising a courier waybill area and at least one of a packing list or product code area and a customizable component area,

printing both a ship date and a customer-specified delivery date on a courier waybill area;

printing a customer-specified personalized message on the customizable component area, wherein the customer-specified date and customer-specified personalized message are being specified in connection with an order of flowers at a website by a user of a consumer ordering system;

forming a combination of at least two portions prior to shipment of the combination and the flowers by a courier on the ship date, wherein said printing is carried out at the distribution center,

the forming a combination includes packing the flowers at the distribution center in response to information on the sheet, and locating the waybill component outside the package during the shipment, but no other of said components located outside the package during the shipment, and the customizable component comprises art work.
